# A HOME COMPUTER FOR THE WHOLE FAMILY

Sega, the world leader in arcade games, has designed a computer for the whole family.

So they can play the latest arcade games at home, or use programmes to help with home and business budgeting.

Or even as an invaluable educational tool to expand learning and creativity.

Whether you want to expand your musical ability, become better at business or just enjoy the latest arcade games, the Sega will perform brilliantly for you.

## THE GREATEST GAMES IN THE WORLD

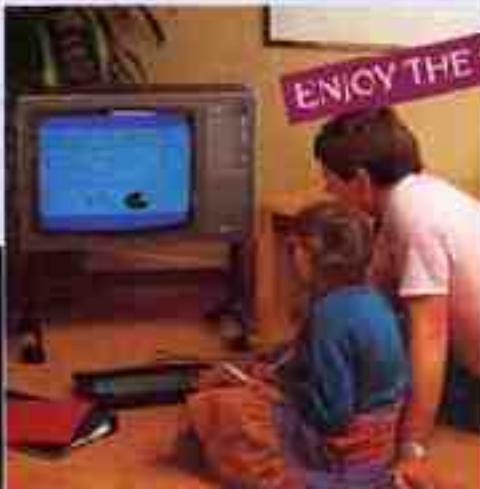

Games you can play on your own television set will give you hours of fun for the family. And, they're a fascinating introduction to the world of computers.

If you want to go beyond the wide range of arcade games available for the Sega, you can create your own. By the way, the Sega lets you create these with full 3-dimensional animation... just the same as an arcade game.

Now take a look at some of the great games available from Sega:

- Corpo Bongo
- Champion Tennis
- Monaco GP
- Star Trek
- R-Sub
- Yarato
- Safari Hunting
- Champion Baseball
- Moto
- Video Flipper
- Siebold Mystery
- Pagan
- Pop Flame
- Airton Bell

The Sega Sc 3000 will allow you to practise your playing skills or even enjoying the thrill of composing your own music.

## ENJOY THE SOUND OF MUSIC

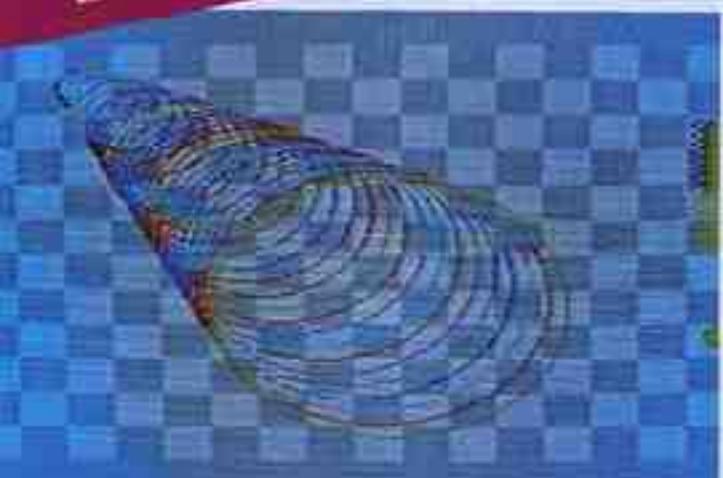

Once you've composed tunes the Sega will play them right back, turning your key board into a musical instrument. If you're really keen the addition of a low-cost printer will make you an instant music publisher.

Champion Tennis

Monaco GP

# EASY TO USE HIGH TECHNOLOGY

The very latest computer technology means your Sega will not only superperform any comparably priced computer, but in a way that's so easy for you.

THE SEGA IS EASY TO COMMAND

From ready-made programmes for education or business, or even programmes you write yourself, the Sega makes it easy. Usually lengthy instructions are reduced to the pressing of just one key. The Sega keys 'beep' every time you depress them so you won't make a mistake.

Programming itself is simplified. The Sega has a larger library of commands than older machines, so that everyday functions are achieved with fewer lines of programming.

The Sega will expand as your use expands. The range of business, educational and game cartridges is growing every day. And the Sega memory can be added in all the way to 32K of storage.

At a low cost you can add a printer to produce graphs and charts in 4 colours. The Sega has a 6 month guarantee and full service is available through all retailers on a continuous basis.

The Sega really is the finest computer available for the home. The price is unbeatable. The reason... it's simply the latest technology available in home computers.

## WHAT WILL I NEED TO BUY?

If you have bought the SC 3000 console to play games, you must have these items—

- The Grands and Power Supply Unit
- The game cartridge of your choice

To give you useable memory you require the same power supply unit and one of three memory cartridges:

- 64 K/2K memory
- 128 K memory
- 256 K memory

Connect the console to your TV antenna port and you're away.

## HIGH QUALITY GRAPHICS AND SOUND

The Sega graphics and sound are simply brilliant. The picture definition, the bright colours and the way you can draw your own pictures so easily, make the Sega a superior machine. In addition, the sound quality is excellent. There are three "voices" to the Sega for the most realistic sound effects.

WHAT OF THE FUTURE?
