

NOTICE FOR NASCAR Deluxe Games

PROBLEM: Heat building up in the CPU area is causing the Game to Freeze. The Raincoat installed on the roof of the CPU area may be blocking the Vent holes.

SOLUTION: Please ensure you perform Bulletin 126 first, (Ensure Fan in Right rear of cabinet is installed and hole is cut in Wood). Remove back CPU access door, look at rear wall to see if Raincoat is blocking two vent holes at the top to the wall rear. If vent holes are not clear, carefully trim raincoat at corner of top and back wall. (See Picture Below) You may need to staple raincoat on back edge to ensure the vents are not blocked.

IMPORTANT!

Not following the directions provided herein may cause your game to malfunction. All electrical work should be performed by the site's Serviceman or Technician.

If you have any questions please contact the SEGA Service Department at the numbers given above.
