Hook, line and sinker!

SEGA Bass Fishing

Sega Bass Fishing is the most addictive simulation yet to come to Dreamcast! With your fishing rod gripped firmly in your hand, cast off with a flick of the wrist to enter the Sega Bass Fishing Association Championship.

The amazing Dreamcast Fishing Controller creates an incredibly realistic fishing experience by actually sensing your hand movements as you cast-off and reel in your line. Catching a big fish will also cause the controller to vibrate.

Incredibly realistic 3D graphics give you an underwater view of the action as you search the depths of Lake Paradise for the "one that got away"! Variable weather and water conditions will affect the fishes' behaviour so you'll need to master a wide variety of special lures and angling techniques.

Featuring Original, Practice and a fast-paced Arcade mode, Sega Bass Fishing is the closest you can get to the thrills of fishing without having to wear wellies!

Pre-order Sega Bass Fishing and the highly original fishing rod accessory here.
