Let The Games Begin!

# Let The Games Begin!

For over twenty years we have trained in the world's toughest video arenas. We have dedicated ourselves to excellence, have accepted the challenge to be the best in our field, have seen our games become the champions of the arcade business...Modern day video legends.

But it is not enough.

We have a new challenge: to be the best home video game system. We've used our vast arcade experience to create new, innovative home video games and systems that set the standard for how America plays.

Each system has The Sega Power Base with a powerful microprocessor to handle the highest memory capacity games in the market . . . for superior high resolution graphics, brilliant colors, unsurpassed sound and multi-directional scrolling. Power Bases even come with Sega arcade and action hit games built right in.

And nowhere else will you find a video game system with dedicated, high resolution 3-D. With liquid crystal shutter glasses and a growing list of dedicated 3-D games, SegaScope 3-D beats the competition hands down.

## The Best Video Game Software

Video gamers demand the best. They require games with the highest quality graphics, the most colors, the most action, adventure and fun . . . the games they play in the arcades.

Only one video game system delivers the best. Sega.

We've taken our hottest exclusive arcade titles and brought them home with the graphic quality, action and excitement gamers expect from a leader.

To this we've added an exciting, diverse list of innovative Sega games to appeal to the diverse likes of America's video gamers.

## The Smartest Software Strategy

We've segmented our software into distinct categories easily recognized by gamers of all ages. Each category is called out on the games with brightly colored banners for easy selection.

New for 1988 is the Sega Challenge Series, games of all types which provide the maximum challenge to skilled gamers. Each Challenge title will have a special Challenge gold banner to identify it as a champion of the challenge games.

Into this regiment we're adding hot, new titles, including popular license titles like *ALF*, *Reggie Jackson Baseball*, *Walter Payton Football* and *Spy Vs. Spy*.

Even before they sit down to play, kids know what to expect from a Sega game . . . Real fun.

## The Best Video Game System

Sega software is supported by a complete video game system that is the leading edge of technology. With Sega video game hardware, gamers have a choice of three system options which offer power and almost infinite expandability.

## The Best Peripherals

Sega peripherals add new dimensions to game play. With a wide range of controller options to choose from, gamers can replace existing peripherals or move up into devices that offer arcade-like control. Sega peripherals offer features such as selective, adjustable rapid fire, pad or joystick control and, in the light phaser series, folding shoulder stocks and selective rapid fire.

Sega peripherals let gamers get farther faster, without reducing the fun, excitement and challenge of Sega games.

## The Strongest Advertising/Promotional Support

Watch as Sega rolls out this summer and fall with three exciting new commercials highlighting our new arcade hits and hardware line up.

And we're broadening our user base with the Sega Challenge Newsletter, a bi-monthly, four color publication with new game reviews, helpful hints and high-reader input.

Add to that a powerful list of in-store promotions, new product displays and self shippers, and strong merchandising support . . . and you have the strongest, most organized follow through in the business.

## Now The Fun Starts

Over twenty years of innovation has brought us to the leading edge of home video games. And this is just the start. Now pick your control pad. Press the start button . . . and prepare to see the future.

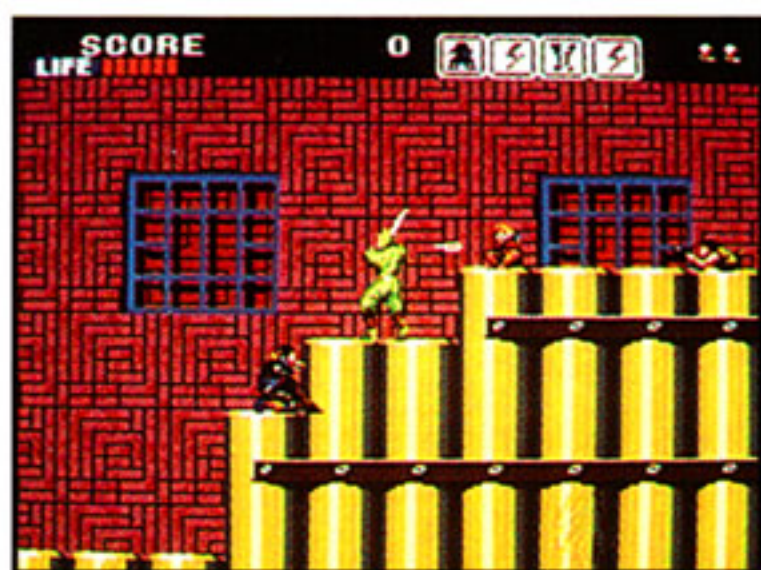

Let the games begin.
